**WARNING**

**Lubricants**

Do NOT use Vaseline, oils, hydrocarbon lubricants or spray silicone anywhere! Petroleum base lubricants will cause swelling of o-rings and seals. The use of other lubricants may attack plastic Noryl®. It is recommended that Dow Corning® silicone grease be used as a lubricant for all control valves. Dow Corning® 7 Release Compound is used in the manufacture of Chandler Systems control valves. (Part # LT-150)

**Sealants**

Pipe dope and liquid thread sealers may contain a carrier that attacks some plastic materials. It is recommended that Teflon® tape be used to seal plastic Noryl® threaded fittings.

---

**Provectr Plus Specifications**

**-How the Provectr Plus Works-_**

The Provectr Plus requires no chemicals for its operation. It consists of two components: (1) AP tank with air compressor and (2) filter tank. The first item serves to oxidize and precipitate iron and sulfur so that the filter can later remove them. The water flows down through the mineral bed of the filter and out the service lines. The collected precipitates must be regularly removed from the filter by reversing the flow of water through the filter running to drain. Called “backwashing” and lasting 10 minutes, the process expands the mineral freeing the iron, sulfur, manganese and turbidity, which are washed out of the filter to the drain. It is important that the correct amount of water is available for the Backwash Cycle. Check pumping capacity to be certain water is available in sufficient volume to adequately backwash the equipment at the specified rate.

Note: Caution should always be used in sizing filters. Always choose a unit by satisfying the

Use of a flow control in the Service Line is highly recommended. Consult the factory or your field sales person with questions. Oxyclean can be added to any existing Reactr or Reactr VS system.
-Installation Requirements-

A/P Tank
• A level floor position between the well pump and pressure tank. (See Typical Installation Diagram.)
• DO NOT install in an area of direct sunlight or where freezing temperatures may occur!

Filter Tank
• A level floor position ahead of piping into water heater.
• Unit must be installed at least 10' ahead of the inlet to a water heater to prevent damage due to back-up of hot water.
• DO NOT install the unit in an area of direct sunlight or where freezing temperatures may occur! (See Typical Installation Diagram.)

Relay Box
• Locate relay box near the filter tank and an unswitched 120v / 60 Hz grounded outlet
• You will notice an 8 foot meter cord and plug attached.

Note: If household plumbing is galvanized and you intend to make an installation with copper or vice versa, obtain dielectric unions to prevent dissimilar metal corrosion.

Where the drain line is elevated above the control valve or exceeds 20 ft. in length to reach the drain, use 3/4 in. I.D. drain line tubing instead of 1/2 in.

When sweat soldering copper pipe, remember to always use lead free solder and flux. Cover yoke and bypass valve with wet rags to prevent heat damage to connections and control valve. If using PVC or plastic pipe, primers and solvent cements specifically recommended for use for potable water are required.

Always Follow Local Plumbing Codes.
• All plumbing lines not requiring treated water should be connected upstream of the Provectr Plus tank.
-PROVECTR Plus Location / Other Requirements-

• Locate the filter near a 120 volt / 60 Hz grounded electrical outlet.
• Check for distance and proper drain installation (e.g. floor drain, washing machine standpipe).
• Determine type and size of piping required for PROVECTR connection (e.g. galvanized, PVC plastic).

Note: If household plumbing is galvanized and you intend to make an installation with copper (or vice versa), obtain di-electric unions to prevent dissimilar metal corrosion.

Note: Where the drain line is elevated above the control valve or exceeds 20' in length to reach the drain, use 3/4" I.D. drain line tubing instead of 1/2" I.D. Drain line tubing is not included.

Caution: When sweat soldering copper pipe (remember to always use lead free solder and flux), bypass valve with wet rags to prevent heat damage to connections and control valve! If using PVC or plastic pipe, primers and solvent cements specifically recommended for use with potable water are required.

Note: All plumbing lines not requiring “filtered” water should be connected “upstream” of the A/P Tank. (See Typical Installation Diagram.)

-Installation Procedure-

Caution: Raised arrows located on the sides of control valve body and bypass valve indicate proper direction of water flow. Install inlet and outlet piping in direction of arrows. It is recommended that a vacuum breaker be installed on the inlet plumbing.

1. Position AP tank and Filter tank at the desired location. The AP tank must be installed between the pump/pressure tank and filter tank. If a water softener is to be installed, it should be positioned after the filter tank.
2. The filter media is shipped separately from the filter tank and should be loaded prior to installation.
   a) Remove control valve by unscrewing it from the filter tank.
   b) Plug distributor with cap provided to prevent any media from entering the inside of the tube.
   c) Place media funnel onto tank and fill tank 1/3 with water
   d) Pour in media. Never fill tank more than 2/3 full to allow room for backwash. Since the Provectr comes with a Vortech tank, gravel is NOT needed.
   e) Remove cap and replace control valve.
3. Turn off main water supply and open nearest faucet to relieve pressure.
4. Cut main line and install the AP tank and Filter tank.
5. Turn on main water supply and allow water to flow through new plumbing and keep the nearest faucet open to evacuate air.
6. Check for leaks.
7. If no leaks, proceed by slowly opening the bypass and allow water to fill the filter tank.
8. Allow water to run through the filter for a few minutes and then turn off the nearest faucet.
- Water Supply Connection and Bypass Valve -

To allow for servicing, swimming pool filling or lawn sprinkling, a manual Bypass Valve has been installed at the factory. The Bypass allows raw water to be manually routed around the filter.

1. Position the A/P Tank and Filter Tank at desired location for installation. The filter tank must be installed after the pressure tank. (See Installation Diagram.) If a water softener is to be installed, it should be positioned after the filter tank.

2. The filter material is shipped separately from the Filter Tank. The Filter Tank must be loaded with material after tank has been placed at the desired location.
   
   A. Remove the control valve by unscrewing from the tank.
   B. Use cap provided to place over top of distributor tube to prevent media from entering tube while filling.
   C. Place media funnel in hole on top of tank.
   D. Pour several gallons of water in the tank. (Fill tank about 1/3 full.)
   E. “D” gravel underbidding is not needed.
   F. Pour in desired media to the correct level.

   Note: 1/3 of the tank should be empty (Freeboard).
   G. After filling the tank with media, fill the tank completely with water.

   Note: This will permit the filtering material to become soaked while preparing the installation and will prevent the control valve from being plugged with floating material on initial backwash.
   H. Remove funnel and clean filter material from tank threads.
   I. Remove cap from distributor tube.
   J. Replace control valve on mineral tank.

Caution: Be extremely careful to position distributor tube into control valve distributor tube pilot hole.

3. Turn OFF main water supply and OPEN nearest faucet to relieve pressure.

4. Cut main line and install appropriate elbows and extensions. Inlet connection on the A/P Tank is 1” FNPT. The outlet is 1” MPT. Inlet is in the top of the tank and outlet is out the bottom.

Caution: Raised arrows located on the sides of control valve body and bypass valve indicate proper direction of water flow. Install inlet and outlet piping in direction of arrows. It is recommended that a vacuum breaker be installed on the inlet plumbing.

Caution: If using PVC pipe for installation of A/P Tank, assemble inlet tee before installing on tank manifold, to prevent excess solvent from entering A/P manifold assembly. Use only Teflon based tap and paste for threaded connections!

5. Turn handle of the bypass valve to the bypass position (horizontally).
6. Turn the main supply on to restore water service to the home.
7. OPEN nearest faucet to evacuate air and repressurize plumbing lines.
8. Check for leaks!
- Air Compressor / Relay Box –

- Locate the air compressor in close proximity to the AP tank assembly.
- Connect the supplied tubing to the compressor and the other end to the AP tank manifold insert.
- Insert the compressor’s electrical plug into the relay box.
- Insert the electrical plug from the relay box to an unswitched 120v / 60Hz grounded outlet.
- Attached by the relay box is a red and white RCA cable which plugs into the “B” and “S” outputs of the control valve.

**Note:** As water flow through the filter, the meter will turn and send a signal to the relay box and the relay box will turn on the air compressor. Make sure air compressor switch is turned on.

- Drain Line Connection -

1. The drain line flow control assembly is pre-assembled for your convenience. Should you choose to hard plumb the drain line, please remove the barb fitting. The flow control housing can be removed by removing the clip and pulling straight out on housing.

**Note:** When re-installing the drain line flow control housing, be sure you hear and feel the O-Ring pop into place before inserting the clip.

2. Install 1/2” I.D. drain line tubing (not included) from hose barb to an open drain. A 4” gap between end of the drain line and the open drain is required to prevent waste water backflow. Keep the drain line as short as possible. An overhead drain line can be used if necessary, but should discharge below the control valve. A syphon trap (taped loop) at the outlet of the drain line is advisable to keep the drain line full and assure correct flow during backwash. Elbows or other fittings must be kept at a bare minimum.

**Note:** Where the drain line is elevated above the control valve or exceeds 20 feet in length, 3/4” I.D. drain line tubing should be used.

- Electrical Connection -

1. Connect the power supply to the control valve and plug into a 115 volt / 60 Hz receptacle.

**Note:** Do not plug into an outlet controlled by a wall switch or pull chain that could inadvertently be turned off.

**Electronic Connections**

P - Power Supply

B - Powered in Backwash Step Only (Cycle #1)

S - Powered in Entire Regeneration Cycle

-**Pressurizing The System -**

2. Slowly rotate handle of the bypass valve to the SERVICE position.
3. Open the nearest faucet to evacuate air from plumbing lines.
4. Check for leaks! If water is observed leaking from bypass, o-rings on valve body may not be seated properly. Exercise bypass valve.
5. After air is evacuated from plumbing lines, turn off faucet.

- Initial Control Valve Operation -

1. Advance control valve to BACKWASH (cycle 1) position and allow water to run to drain for 3 to 4 minutes.
Main Menu

1. To enter Main Menu, press the Menu/Enter button. (Time of Day will flash)

2. To set the **Time of Day**, press the Set/Change button. (First digit will flash)
   - To change digit value, press the Set/Change button.
   - To accept the digit value, press the Menu/Enter button.
   - Next digit will flash to begin setting.
   - Once the last digit display is accepted, all digits will flash.

3. To set **A.M.** or **P.M.**, press the Menu/Enter button.
   - To change digit value, press the Set/Change button. Example (R)
   - To accept the digit value, press the Menu/Enter button.
   - Once A.M. or P.M. is accepted, the next menu item will flash.

4. a. To set the **Number of Days between Backwash Cycles** (A), press the Set/Change button.
   Repeat instructions from step (2).
   **Notes:**
   1) Maximum value is 29.
   2) If value set to 0, Automatic Backwash will never occur.
   3) Default setting is 6 days for filters.

5. To Exit Main Menu, press the Menu/Enter button.
   **Note:** If no buttons are pressed for 60 seconds, the Main Menu will be exited automatically.
Normal Operation

1. Home Display
   a. Alternates between the display of Time of Day and Number of Days until the Next Backwash. (Metered Softeners will alternate between time of days and gallons remaining until next regeneration)
      - Days Remaining until the Next Backwash will count down from the entered value until it reaches 1 day remaining.
      - A Backwash Cycle will then be initiated at the next designated regeneration time.

2. Battery Back-Up (Uses a standard 9-volt alkaline battery.)

   Features of Battery Back-Up:
   • During power failures, the battery will maintain the time of day as long as the battery has power. The display is turned off to conserve battery power during this time. To confirm that the battery is working, press either button and the display will turn on for five (5) seconds.

   • If power failure occurs while system is regenerating, the valve will motor to a shut off position to prevent constant flow to drain. Depending upon system pressure and other factors, it is possible to observe a reduced flow to drain during this step. After power is restored, the valve will return and finish the cycle where it left off prior to the power interruption.

   • When used without battery back-up, during a power failure, the unit stops at its current point in the regeneration position and then restarts at that point when the power is restored. The time will be offset by the increment of time the unit was without power, so it is necessary to reset the time of day on the unit. No other system will be affected.

Starting Extra Regeneration Cycle

1. To Start Delayed Extra Cycle
   If Days Remaining Until Next Backwash does not read ‘1’, press and hold the Set/Change button for 3 seconds until the display reads ‘1’.
   - Backwash cycle will initiate at the next designated backwash time.

2. To start Immediate Extra Cycle First complete above step.
   - With Days Remaining Until Next Regeneration at ‘1’.
   - Press and hold the Set/Change button.
   - After 3 seconds, the backwash cycle will begin.

3. To Fast Cycle thru regeneration First complete above 2 steps.
   Note: Press and hold the Set/Change button for 3 seconds to advance to the next cycle step. Fast Cycle is not necessary unless desired to manually step through each cycle step.
   (Repeat until valve returns to the home display)

Master Programming Mode

To enter Master Programming Mode, press and hold both buttons for 5 seconds.

Note: All Master Programming functions have been preset at the factory. Unless a change is desired, it is NOT necessary to enter Master Programming Mode.

1. Regeneration Time (r)
   - The time of day at which backwash may take place is designated by the letter “r”.
   - Default regeneration time settings is 12a
   - The first display digit indicates A.M. or P.M. To change the value, press the Set/Change button.
   - Press Menu/Enter button to accept the value and move to the next digit.
   - The second and third display digits indicate the hour at which the backwash will occur.
   - Change the digits with the Set/Change button and accept with the Menu/Enter button.
   - After the entire display flashes, press the Menu/Enter button to move to the next menu item.

2. Regeneration Cycle Step Times (Steps 1, 2, 3, 4)
   - The next 4 displays set the duration of time in minutes for each backwash cycle step.
   - The step number which is currently modifiable is indicated on the far left of the display screen.
   - The number of minutes allotted for the selected backwash step is displayed on the far right.
   - Change the digit values using the Set/Change and Menu/Enter buttons as described above.

3. Bluetooth Enabled
   - bE - 1 (ON)
   - bE - 0 (OFF)

4. Bluetooth Password
   - bbPP is displayed for one second, then password is displayed.

5. To Exit the Master Programming Mode, press the Menu/Enter button until time of day returns.

Note: If no buttons are pressed for 60 seconds, the Master Programming Mode will be exited automatically.
Utilizing Bluetooth Control

For simplified set up and control, please install the Legacy View on a compatible Bluetooth 4.0+ enabled smart phone or tablet.

1. Download and install the Legacy View app from the Google Play Store, Apple App Store

2. Open the Legacy View app
   • Choose a valve device at any time from the list of available devices to connect to by clicking on it.
   • If the valve you want to connect to doesn’t show up, or there is a problem connecting to a device you can press the “Scan for Devices” button or the Legacy View logo at any time to refresh the list and start the process over.
   • If the valve device is a BTLE valve and it has a password other than the default password, the first time you connect to it the app will ask you to enter the password. After entering it the first time you should not need to enter it again unless it changes.

3. BTLE Valve devices can be updated by the App. When the app is updated from the Google Play Store or the Apple App Store, it may contain an updated firmware program for the valve devices. These updates could contain new features or operational improvements. It is up to the user to allow these updates to be sent to the valve device. Uploading a new program takes approximately 1 minute.

Dashboard
NOTE: Consult your dealer before making any changes

From the Dashboard, all items in ORANGE can be changed, while blue fields are informational only.

If you are unsure about the function of the field click the i for more information.
Set Up Utilizing Bluetooth App

Change Time of Day (Press “SET” to set time automatically based on device).

For Filters:
Set Backwash Frequency
This sets the amount of day between backwash cycles

Set Regeneration Time
Example: For 2a.m., just type 2, choose a.m., and press ‘OK’
Note: If you have a filter and a softener the valves should be set to regenerate at different times. Factory default times are 12a.m. for filters, and 2 a.m. for softeners.

Advanced Settings
NOTE: Consult your dealer before making any changes. We do not recommend changing Advanced Settings unless you have a good understanding of the system operation.

From the Advanced Settings, all items in ORANGE with a “set” button can be changed.
Status and History

From the **Status and History**, all items in **ORANGE** can be reset.

1. Start a regeneration or backwash cycle

   **Option 1:**
   - Click the “Regenerate Unit Now.”
   - Once a regeneration has been started, if you would like to force the unit into the next cycle step click “Go to Next Regeneration Step”.

   **Option 2:**
   - “Regenerate Unit at Next Regen Time” button
   - This will take the system into a backwash cycle at the next regeneration time.

Pressing this icon will show a list of the data that is in the graph.

Touch any graph to enlarge and see details. Enlarged graphs are able to be zoomed in by pinching with two fingers.

(Enlarged graph shown below)

Pressing the .csv logo in the corner will allow the graph data to be exported and shared.

A. General Preliminary Instructions
PERFORM BEFORE ALL SERVICING OPERATIONS
1. Turn off water supply to conditioner.
   - If the conditioner installation has a “three valve” bypass system, first open the valve in the bypass line, then close the valves at the conditioner inlet and outlet.
   - If the conditioner has an integral bypass valve, put it in the bypass position.
   - If there is only a shut off valve near the conditioner inlet, close it.
2. Remove cover and relieve water pressure in the conditioner by stepping the control into the backwash position momentarily. Return the control to the service position.
3. Unplug electrical cord from outlet.

B. To Replace Powerhead
1. Remove the control valve cover and disconnect the power supply.
2. Disconnect the meter cable from circuit board and feed back through control (if existing meter is being re-used)
3. Remove lower back base screws and detach lower back base.
4. Remove screw and washer at drive yoke. Remove powerhead mounting screws. The entire powerhead assembly will now lift off easily.
5. Put new powerhead on top of the valve. Be sure the drive pin on main gear engages slot in drive yoke (wide side of drive yoke upright must face to the left away from the motor).
6. Replace powerhead mounting screws. Replace screw and washer at drive yoke.
7. Reattach lower back base.
7. Reconnect meter signal, wire and power supply.
8. Reinstall cover.

C. To Replace Piston Assembly
1. Follow steps A1 - A3
2. Disconnect the meter signal wire from the circuit board.
3. Remove lower back base screws and detach lower back base.
4. Remove screw and washer at piston drive yoke. Remove powerhead mounting screws. The entire powerhead assembly will now lift off easily.
5. Remove piston retaining plate screws.
6. Pull upward on end of piston yoke until assembly is out of valve.
7. Inspect the inside of the valve to make sure that there is no foreign matter that would interfere with the valve operation.
8. Install new seals and spacers.
9. Take new piston assembly and push piston into valve by means of the end plug. Twist drive yoke carefully in a clockwise direction to properly align it with drive gear. Reinstall piston retaining plate screws.
10. Follow steps B5 - B9

D. To Replace Seals and Spacers
2. Disconnect the meter signal wire from the circuit board.
3. Remove screw and washer at piston drive yoke. Remove powerhead mounting screws. The entire powerhead assembly will now lift off easily. Remove piston retaining plate screws.
4. Pull upward on end of piston rod yoke until assembly is out of valve. Remove seals and spacers. (Note: Special end spacer must be reused)
5. Lubricate new seals with silicone lubricant included in the seal and spacer kit. Make sure the special end spacer is properly seated in the valve body. Install new seals and spacers individually, pressing around the outer edge of each seal to make sure it is seated. (When all seals and spacers are seated properly, you will have a 1/4” of space between the top seal the the top of the valve body)
F. To Replace Meter
1. Follow steps A1 - A3
2. Unplug meter cable from front of circuit board.
3. Unscrew meter assembly nut from valve body.
4. Remove meter from valve body and clean or replace as necessary.
5. Reinstall meter, nut and cable.

**Control Valve Error Code Diagnosis**

Under normal operating conditions, when your control valve is in the “in service” position, the display should alternate between the current time of day and the number of days remaining (for filters and time clock softeners) or gallons remaining (for metered softeners) until the next regeneration. This is the “home display.” If the valve is currently going through a regeneration cycle, the display will show the cycle step on the left side of the display and the number of minutes remaining in that step on the right side of the display. If any other information is being displayed, then the valve is informing you of an issue. There are five error codes which could indicate an issue with the control valve. When an error is being displayed, the valve will be in a stopped position, and the buttons will not respond to being pressed. Even if the cause of the error code is corrected, the error code will not clear until the power supply has been disconnected and reconnected (this will be referred to as “cycling” the power). All error codes are displayed as the letters “Err” followed by a flashing number 2-6:

**Error 2** - Valve is searching for homing slot.
Allow valve to continue running. If the homing slot is found, the valve will return to the home display, otherwise, another error code will appear.

**Error 3** - No encoder slots are being seen.
This occurs when the motor is running, but the encoder is not seeing any of the slots in the encoder wheel. This can happen if the encoder has been disconnected, but most commonly occurs when debris in the valve body has stopped the piston, causing the encoder wheel to be unable to turn.

1. Check encoder connection. If the encoder is plugged in and snapped into place, skip to step #2 below. If encoder is disconnected, reconnect it and cycle power to clear the error.
2. Disconnect powerhead from valve body, cycle power to clear the error code. Manually cycle the powerhead through the regeneration cycle steps to verify that the motor can cycle properly while the powerhead is disconnected from the valve body. If the error 3 does not reappear, skip to step #3 below. If the error 3 does reappear, order a board & motor kit to replace the circuit board & motor.
3. Remove piston and seals from the valve body and inspect valve body for debris. Replace the seal & spacer kit. Inspect piston and replace piston if Teflon coating is worn.

**Error 4** - Unable to find homing slot.

1. Check encoder wheel for debris.
2. Cycle power. Valve should either find home or go to a different error code. If error 4 returns, replace powerhead assembly.

**Error 5** - Motor overload.
This occurs when the motor current is too high. This could be caused by an issue with the motor itself, but is typically caused by friction in the valve body.

1. Disconnect powerhead from valve body and cycle power to clear the error code.
2. If the error 5 returns, replace the motor. Otherwise, manually cycle the powerhead through the regeneration cycle steps to verify that the motor can cycle properly while the powerhead is disconnected from the valve body. Either way, proceed to the next step.
3. Remove piston and seals from the valve body and inspect valve body for debris. Replace the seal & spacer kit. Inspect piston and replace piston if Teflon coating is worn.

**Error 6** - No motor current.
This typically occurs if the motor cable has come unplugged from the circuit board. Check that the motor cable is plugged into the circuit board and attached to the motor. If this is not the issue, the motor or circuit board may need to be replaced.

**No Display**
If your display is blank, there is no power going to the circuit board due to one of the following factors:

- The electrical outlet is not powered or is switched off
- The power cable has come unplugged from the circuit board
- The power supply has come unplugged from your electrical outlet
- The power supply has come unplugged from the control valve
- The power supply is not working
This Warranty cannot be transferred – it is extended only to the original Purchaser or First User of the Product. By accepting and keeping this Product you agree to all of the warranty terms and limitations of liability described below.

**IMPORTANT WARNING – READ CAREFULLY**

**THE WATER SOFT WATER TREATMENT EQUIPMENT INSTALLATION, OPERATING AND MAINTENANCE INSTRUCTIONS MANUAL**

to avoid serious personal injury and property HAZARDS and to ensure safe use and proper care of this product.

**MODEL NUMBERS COVERED**

Water Softeners, Media Filters, UpFlow Filters, Provectrs, UV, RO, Filters, Chemical Feed

**WHAT IS COVERED BY THIS WARRANTY**

WATERSOFT LLC ("WATER SOFT") warrants that at the time of manufacture, the water treatment equipment shall be free from defects in material and workmanship as follows:

- Thermoplastic Mineral Tanks........................................10 yrs.
- Softener/Filter Control Valves ........................................... Proprietary ..........7 yrs.
- Brine Tank Assemblies.....................................................5 yrs.
- Reverse Osmosis System..................................................5 yrs.
- Other Accessories & Parts.................................................1 yr
- REVERE Wireless Low Salt Alarm.......................................90 days.

* This warranty does not include media and/or cartridge filter elements.

**ADDITIONAL TERMS & CONDITIONS**

**What WATERSOFT Will Do If You Have a Covered Warranty Claim**

WATERSOFT will at its option either make repairs to correct any defect in material or workmanship or supply and ship either new or used replacement parts or products. WATERSOFT will not accept any claims for labor or other costs.

**Additional Exclusions and Limitations**

This Warranty is non-transferable and does not cover any failure or problem unless it was caused solely by a defect in material or workmanship. In addition, this Warranty shall not apply:

- If the water treatment equipment is not correctly installed, operated, repaired and maintained as described in the INSTALLATION, OPERATING & MAINTENANCE INSTRUCTION Manual provided with the Product;
- If the tank is not the size indicated for the supply line size of the installation, as described in the Manual.
- If the unit has not always been operated within the factory calibrated temperature limits, and at a water pressure not exceeding 150 psi.
- To any failure or malfunction resulting from abuse (including freezing), improper or negligent handling, shipping (by anyone other than WATER SOFT), storage, use, operation, accident; or alteration, lighting, flooding or other environmental conditions;
- To any failure or malfunction resulting from failure to keep the unit full of potable water, free to circulate at all times; and with the tank free of damaging water sediment or scale deposits;
- This Warranty does not cover labor costs, shipping charges, service charges, delivery expenses, property damage, administrative fees or any costs incurred by the purchaser in removing or reinstalling the water treatment equipment.

- The Warranty does not cover any claims submitted to WATERSOFT more than 30 days after expiration of the applicable warranty time period described in this Warranty, and does not apply unless prompt notice of any claim is given to an authorized WATERSOFT distributor or to WATERSOFT and WATERSOFT or a designated contractor is provided access to the installation and to the water treatment equipment.

**THESE WARRANTIES ARE GIVEN IN LIEU OF ALL OTHER EXPRESS WARRANTIES. NO WATERSOFT REPRESENTATIVE OR ANY OTHER PARTY IS AUTHORIZED TO MAKE ANY WARRANTY OTHER THAN THOSE EXPRESSLY CONTAINED IN THIS WARRANTY AGREEMENT.**

**ADDITIONAL WARRANTY LIMITATIONS**

ANY IMPLIED WARRANTIES THE PURCHASER MAY HAVE, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, SHALL NOT EXTEND BEYOND THE APPLICABLE TIME PERIODS SPECIFIED ABOVE. Some states do not allow limitations on how long an implied Warranty lasts, so the above limitation may not apply to you.

**LIMITATIONS OF REMEDIES**

THE REMEDIES CONTAINED IN THIS WARRANTY ARE THE PURCHASER'S EXCLUSIVE REMEDIES. IN NO CIRCUMSTANCES WILL WATERSOFT OR THE SELLER OF THE PRODUCT BE LIABLE FOR MORE THAN, AND PURCHASER-USER'S REMEDIES SHALL NOT EXCEED, THE PRICE PAID FOR THE PRODUCT. IN NO CASE SHALL WATERSOFT OR SELLER BE LIABLE FOR ANY SPECIAL, INCIDENTAL, CONTINGENT OR CONSEQUENTIAL DAMAGES. Special, incidental, contingent and consequential damages for which WATERSOFT is not liable include, but are not limited to, inconvenience, loss or damage to property, consequential mold damage, loss of profits, loss of savings or revenue, loss of use of the products or any associated equipment, facilities, buildings or services, downtime, and the claims of third parties including customers. Some states do not allow the exclusion or the limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

**WHAT TO DO IF YOU HAVE A PROBLEM COVERED BY THIS WARRANTY**

Any Warranty coverage must be authorized by WATERSOFT. Contact the person from whom you purchased the Product, who must receive authorization from an WATERSOFT distributor or WATERSOFT. If you do not receive a prompt response, call WATERSOFT directly at 800-462-3790. Notice of a Warranty claim relating to replacement parts or products should be submitted by the authorized distributor to WATER SOFT at the following address:

**WaterSoft, 710 Orange Street, Ashland, OH 44805**

If your Product is new and not used and you wish to return it, contact your WATERSOFT distributor.
